PROFESSIONAL SUMMARY

Senior / Lead System Analyst with 5+ years of experience in a large banking environment, focused on solution and integration architecture for distributed microservice-based systems. Experienced in distributed transactions, event-driven architecture, API and event contracts, platform architecture and workflow orchestration, with practical focus on reliability, consistency, idempotency, failure handling and reconciliation. Strong hands-on experience with REST/OpenAPI, SOAP/XML, Kafka/AsyncAPI, BPMN/Camunda, UML, data modelling and authentication/authorization. Experienced in cross-team solution alignment, architecture standards, technical documentation and functional leadership without formal people management. Designed and implemented an AI-assisted system analysis agent using LLMs, controlled tools and specialised analytical agents, with source-grounded analysis, provenance and hallucination-control mechanisms.

CORE COMPETENCIES

Solution Architecture; Integration Architecture; Microservices; Distributed Systems; Domain-Driven Design; Event-Driven Architecture; Platform Architecture; Architecture Governance; ADR

Requirements Engineering; FR/NFR; Solution Design; State Machines; UML; BPMN; ERD; Data Modelling

REST; OpenAPI 3.x; SOAP/XML; Kafka; AsyncAPI 3.x; Event Contracts; Idempotency; Retry/DLQ

Consistency; Concurrency Control; Failure Recovery; Reconciliation; Timeout Handling; Observability

LLM; AI Agents; RAG; Tool Calling; Source-Grounded Analysis; Provenance; Hallucination Control

PROFESSIONAL EXPERIENCE

Large Russian Bank — System Analyst / Senior System Analyst | 2021–Present | Remote

- Worked on the architecture and evolution of a large omnichannel banking platform based on microservices and Domain-Driven Design, supporting 40+ development teams, ~10 business domains and 90+ microservices.
- Designed distributed transaction flows with explicit operation-state ownership, idempotency, concurrency control, timeout handling and reconciliation.
- Designed REST/OpenAPI, SOAP/XML and Kafka/AsyncAPI integrations; selected patterns according to latency, coupling, consistency, reliability and legacy constraints.
- Designed event-driven patterns including at-least-once delivery, idempotent consumers, partition ordering, retry/DLQ and event-contract evolution.
- Designed BPMN/Camunda workflow solutions with long-running processes, retries, timeouts, compensation, reconciliation and controlled manual intervention.
- Contributed to platform-wide architecture standards, reusable integration patterns, architecture reviews and cross-team solution alignment.
- Performed functional leadership without formal people management; coordinated day-to-day activities and resolved cross-team issues.
- Participated in candidate interviews, technical assessment and knowledge-sharing sessions.
- Designed and implemented an AI-assisted system analysis agent based on LLMs, controlled tools and specialised analytical agents, using source-grounded analysis, evidence provenance and FACT / INFERENCE / UNKNOWN classification.

Insurance Industry — Claims / Insurance Expert | ~2009–2021

- Worked in insurance operations and claims management, progressing from client-facing roles to expert analytical responsibilities.
- Investigated complex insurance claims and performed regional loss-ratio analysis across property insurance products.

Republican Clinical Hospital named after Kuvatov — Chief Engineer

- Coordinated technical and operational engineering activities, dependencies and stakeholder interactions.

TECHNICAL STACK

Backend & Integration: REST, OpenAPI 3.x, SOAP/XML, Kafka, AsyncAPI 3.x

Architecture & Modelling: Microservices, DDD, UML, BPMN, PlantUML, ERD

Workflow: Camunda, BPMN

Databases: Oracle, PostgreSQL, ClickHouse

Security: Keycloak, OAuth 2.0, JWT, mTLS

Engineering: Jira, Confluence, Agile, Waterfall

AI: LLM, RAG, AI Agents, Prompt Engineering, Tool Calling

EDUCATION

Ufa State Aviation Technical University — Engineer, Modeling and Research of Operations in Organizational and Technical Systems | 2002–2008

CERTIFICATIONS & RECOGNITION

Agile Software Development; Digital Product Owner (dPO); Load Testing

Best Employee in the Bank — 2021; multiple annual professional awards

LANGUAGES

Russian — Native | English — A2 + Technical English

SELECTED ARCHITECTURE PORTFOLIO

01 Payment & Transfer Architecture — distributed transaction state ownership, idempotency, reconciliation

02 Event-Driven Architecture — Kafka, at-least-once delivery, idempotent consumers, AsyncAPI

03 Integration Architecture — REST/OpenAPI, SOAP/XML, Kafka

04 Platform Architecture — governance, standards, multi-team architecture

05 Workflow Orchestration — BPMN/Camunda, retries, compensation, reconciliation

06 AI-Assisted System Analysis — LLM, agents, tools, provenance, hallucination control
